(West Germany) 1961, v. 179, no. 2, p. 81-91.

DESCRIPTORS: *Hydrocarbons, *Aliphatic compounds,
*Chlorides, *Pyridines, Hydroxides, Chemical
reactions, Quantitative analysis.

The pyridine-alkali reaction which has become known
as the "Fujiwara reaction" for the qualitative detection
of chloroform, was tested as to its use in the determina-
tion of other chlorinated aliphatic hydrocarbons. Pro-
cedures are given for the quantitative determination of
carbon tetrachloride, ethane tetrachloride, chloroform
ethylene tetrachloride, ethylene trichloride, ethane
dichloride and ethylene chlorohydride in indoor air.

DESCRIPTORS: *Lead, Microanalysis, *Phosphoric
acid, Anodes, Mercury alloys, Voltmeters, Pyridines.

By means of anodic amalgam voltammetry it is possible
to determine very small traces of lead and other heavy
metals in concentrated phosphoric acid, (sp. gr. 1.7).
The only reagent added is pyridine. Thus the danger of
introducing impurities is very small in contrast to ex-
isting methods. The time required for a single deter-
mination is 15 min. The variance for 1 ppm. lead from
11 determinations was 3.8%. (Author)
